## M & E / MEP COORDINATION

Over the years, we seen many projects were executed without proper M&E or MEP Coordination thus leading to a catastrophic clash of services installations right from design stages to operation, maintenance and management stage. This occurs due to lack of coordination between M&E installation contractors and building contractors resulting project delays and improper installation.

FCAD offers on-site M&E or MEP Coordination Services to ensure that M&E services installation are done in a proper manner in accordance to manufacturer, complies with local authority requirement, meet the standard and quality requirement set forth by the consultant based on standard industry practice. Our M&E Coordinators are responsible for managing all components of an M&E services installation in construction projects related to the various mechanical and electrical elements of the facility.

Typically engaged by contractors, construction firms, developers and consultants, we combine a wide technical knowledge of various M&E trade with the management skills necessary to coordinate the work of a number of different employees working on different M&E trades and stages. Our M&E Coordination Scope of service includes:

- Coordinating Project M&E or MEP Contractors

- Supervising Project M&E or MEP Contractors
- Supervision, Coordination and Obstruction Analysis of M&E or MEP Services
